Course objectives: They are to identify the following.

- learning the nature of the classical mechanics as well as its failure to describe microscopic particles
- learning the historical development of the quantum theory and its postulates
- application of quantum theory for H-atom as an example of simple chemical systems

Syllabus: A-Theoretical contents

classical mechanics – black body radiation and photoelectric effect – Hydrogen electronic spectra – Compton-effect – De Broglie relation and dual nature of microscopic particles- Schrödinger equation- solution of SE for a particle in one (two and three) dimensional box – solution of SE for rigid rotor – solution of SE for harmonic oscillator – solution of SE for H-atom.

2. Course Main Objective

This course aims to give students the basic principles quantum theory and its applications on some chemical systems
